

StreamLine

The TRC line of Flexible Resistance Projection/Spot Welders

Specifications

Type:	StreamLine, LPW Series
Frame:	Pedestal Type, with Adjustable Upper Crown and Lower Knee
Transformer:	Conventional AC or MFDC Inverter
Voltage:	Single or Three Phase
Throat Depth:	From 12" to 48", Variable
Air Cylinder:	Savair or Ohma Air/Oil Cylinders with Various Strokes Available
Water System:	Inlet/Outlet Manifolds with Visi-flow Indicators with Shut-offs
Initiation:	Foot Switch, Single/Dual Palm Buttons
Weld Control:	As per Your Unique Specifications

Advantages

- Versatility allows use of both standard or special design tooling fixtures
- Significant cost savings over comparable standard welding machine with similar capability
- Can accommodate single or multiple welding cylinders to suit a variety of applications
- Easy access to all machine components for periodic maintenance and expansion
- Dual lower channels and dual upper lifting lugs for transport by fork truck or overhead crane
- Can be equipped for performing both spot and projection welding operations
- Machine has small footprint and reduces space requirements
- Machine can be readily upgraded to include features such as light curtains, PLC controls, sensors for part presence detection, operator interface controls, etc.

The Roueche Company uses standard machine components from a variety of manufacturers. As a result, StreamLine welders can be equipped with the component brands of your choice, with special attention given to your unique machinery specifications. For additional information on this welder and other models or company services, please feel free to contact our office.
